- Battery Compartment

When the job takes you below ground level, don't go unprepared. You need a reliable gas detector watching over you at all times. Introducing The Protector AR Series.

This continuous monitoring gas detector allows you to customize your unit to detect combustibles (LEL), oxygen, carbon monoxide, hydrogen sulfide, or any combination of the four. The two line display, with automatic backlight, shows all gas levels simultaneously. Warning LED's and audible alarms provide the operator with notification of hazards, and a thumb wheel controls an audible tick rate to aid in locating the source of combustible gas leaks such as natural gas, propane and butane. The flexible gooseneck is used to assist in locating the source of gas leaks as well as perform remote sampling.

Constructed of durable High Impact ABS plastic the Protector AR Series offers many features and configurations allowing you meet your safety program regulations.

- Autolog stores all peak readings during any operational session.
- Bump Test requires operator to test instrument prior to use & data is recorded for future download for compliance purposes.
- Extended memory stores 1600+ sessions

U-TECK offers full product support including personnel training and a yearly certification program, as well as offering replacement test gases and optional accessories.
