SEALGUARD II KIT

FEATURES:

- **Designed for high inflows in precast or brick-lined structures**
- **Stops leaks of up to 50 GPM**
- **Can be injected into flowing water with a reaction time of 3 seconds**
- **Dual-component polyurethane grout**
- **Permanent fix**
- **45 PSI compressive strength**
- **Each set of grout contains one cubic foot of cured material that will not shrink**

Repair Options

- **Excavate and replace? – Very Expensive**
- **Reline with cements or elastomers? – Expensive, and the problem area must be dry**
- **Grout with cements? – Nothing more than a temporary patch**
- **Repair with chemical grouts? – Will wash out if the flow rate exceeds 1 to 2 GPM**
None of these options will stop leaks of up to 50 GPM in seconds!

One manhole leaking 5 GPM will leak 7,200 gallons per day! If the cost of treating wastewater is $1.70 per thousand gallons, then this single manhole with a 5 GPM leak costs $4,467 per year. That is $4,467 per year forever.

The savings in wastewater treatment fees in the first year for a single manhole with a minor leak is over $4,000.

Before

After

A SealGuard II Kit contains:

• Twelve sets of dual-component polyurethane grout • Twelve static mixers • Dual-component heavy-duty caulk gun • Safety goggles • Two pairs of chemical gloves • Safety clothing • Instruction sheet • MSDS sheet • Convenient waterproof carrying case • Top-notch support from SealGuard technicians

SealGuard II stretches your repair dollars!

• Each component can be reordered separately
• Larger quantities available (full and half pallets)

SealGuard II requires only these tools:

• Hammer drill; 5/8" masonry bit; Hammer; Flat-tip screwdriver; Knife; Putty knife;
• Rags, oakum or burlap

SealGuard II cleans up easily!

• Snap mixers (15 minutes after injection) with a sharp downward motion.
• Use a putty knife to scrape excess material from concrete.
• Dispose of waste foam with ordinary wood or plastic waste.
